

2015 Pertussis cases: all graphs are as of 2/28/15

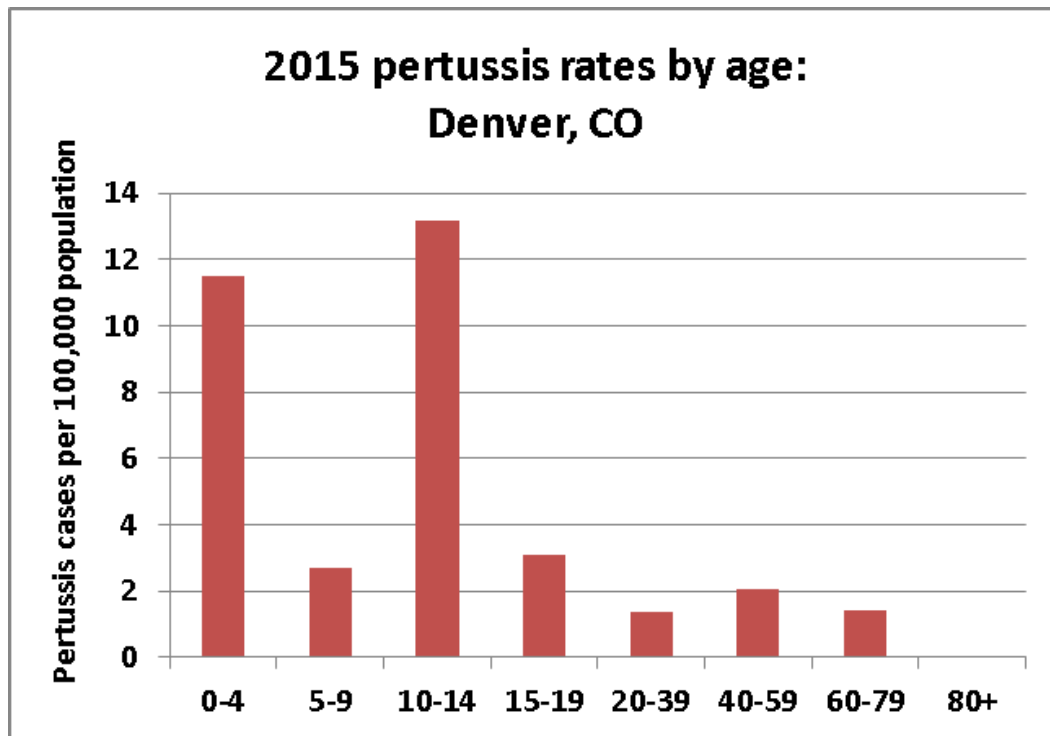

18 people have been diagnosed with pertussis so far this year.

3 people were diagnosed with pertussis in February. That is the lowest number since 2011!

2015 Pertussis cases: all graphs are as of 2/28/15

So far, pertussis rates are highest among 10-14 year-olds. Two infants (less than 1 year of age) have had pertussis, and one was hospitalized.
